PROFILE

Web developer with close to 7 years in the JavaScript and TypeScript ecosystem, after studying web development in Gothenburg. I have worked across different parts of the industry, from product companies building one product over the long run to consultancies moving between several clients at once. I work across the whole stack, with React, Vue, and Angular on the front end, Node, .NET, and PHP on the back end, and React Native for mobile, and I am comfortable owning a feature from the first commit through to production.

That range runs from small static sites to large web applications, for clients including PostNord, Nordic Wellness, and Inera (the 1177 healthcare platform). On the frontend I care about design and UX, not only how things work. Outside work I keep a small home lab for the tools I actually use, and spend a lot of my free time following new tech, especially AI. Originally from Cuba, based in Gothenburg.

EMPLOYMENT HISTORY

Fullstack Developer (Consultant) at Dear Friends, Gothenburg

JANUARY 2026 — JUNE 2026

Fullstack developer at a creative agency in Gothenburg, moving between several client projects each week. My main focus was Nordic Wellness, with regular work across the agency's other web clients.

Key Achievements:

- Built and shipped the Nordic Wellness React Native apps with Expo, pulling live content and pricing from the Umbraco Delivery API
- Owned the release process: weekly builds, TestFlight and Google Play Console, and on-device testing before each public release
- Built and maintained Umbraco (.NET) sites for Nordic Wellness, Grand Fitness, and Fred's Food and Coffee
- Maintained and updated WordPress sites for IEMS, BabySlides, Doxa Bostad, and Hagab

Tech Stack: React Native, Expo, Umbraco, C#/.NET, WordPress, PHP, JavaScript, TypeScript

Fullstack Developer (Consultant) at Nexer AB, Gothenburg

FEBRUARY 2023 — MARCH 2025

A consultant role at Nexer, working as a fullstack developer with a frontend focus across several clients of different sizes, from solo projects to larger agile teams. I moved between assignments as priorities shifted and contributed to each team rather than leading.

Key Achievements:

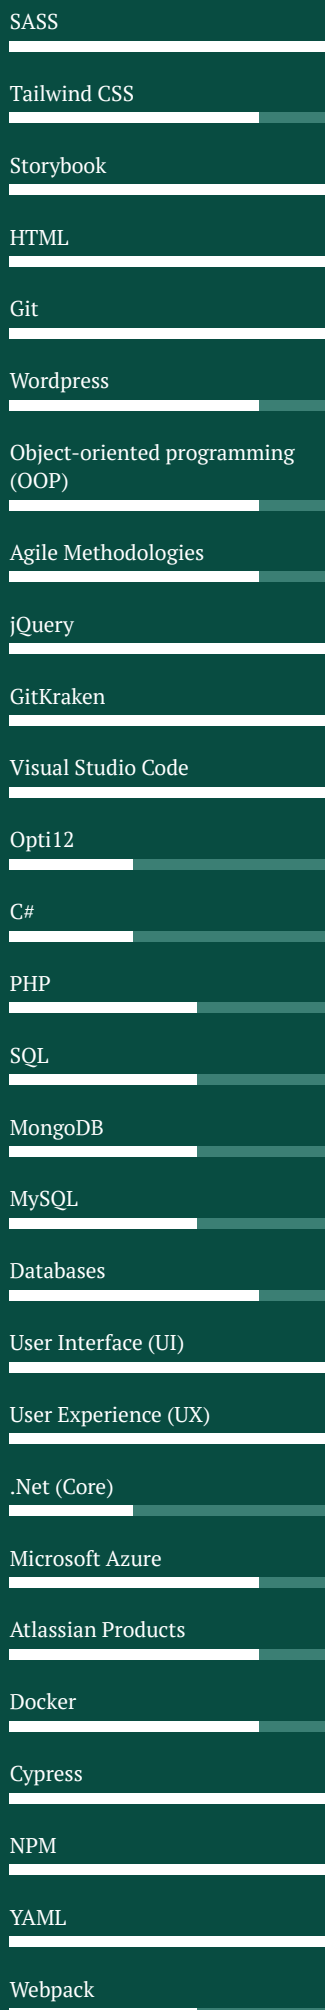

- Built a React Native mobile app for Göteborgs Stadsmission that connects people donating surplus food with people in need across Gothenburg, working as the sole developer on the project
- Developed an internal web tool for PostNord used to plan postal delivery routes across Sweden, working as a frontend developer in a larger team, built with React
- Contributed to the upgrade and ongoing maintenance of Inera's public health services, including 1177, as part of one of several development teams, on a platform built with Optimizely and an Angular frontend
- Worked with backend developers on REST APIs and .NET integrations, and supported junior developers on React and TypeScript

Tech Stack: React, TypeScript, React Native, Optimizely 11/12, SASS, .NET Core, C#, SQL Server, Azure DevOps, Jira

Front-End Developer at Nordic Retail Group, Gothenburg

AUGUST 2021 — JANUARY 2023

Sole frontend developer on Enginio, a Vue.js platform that lets companies build advertising campaigns and brand activations. I continued on the product after Nordic

Retail Group acquired Digital People, owning all frontend development and building out a reusable component library.

Key Achievements:

- Developed and maintained the Enginio frontend as the only frontend developer, working closely with backend and product
- Built a reusable Vue.js component library in Storybook for faster, more consistent development
- Owned frontend architecture and tooling decisions, and set up CI/CD with automated testing and linting
- Occasionally built small static WordPress sites from scratch alongside the main product work
- Led technical decision-making for architecture, tooling, and development workflows
- Worked cross-functionally with designers (Figma), backend developers, and product owners in agile sprints
- Optimized application performance, reducing initial load time from 4.2s to 1.8s through lazy loading and bundle optimization

Tech Stack: Vue.js, Vuex, SASS, Node.js, Express, MongoDB, Cypress, Storybook, Figma

Front-End Developer at Digital People, Gothenburg

DECEMBER 2020 — AUGUST 2021

Sole frontend developer at Digital People, a Gothenburg startup building Enginio, the Vue.js advertising and brand-activation platform. Joined through Framtiden AB and owned all frontend work for the product in a fast-moving startup environment. Digital People was acquired by Nordic Retail Group in 2021, where I continued on the same product.

Key Responsibilities:

- Owned the entire frontend codebase and feature development as the sole frontend developer
- Made frontend architecture decisions independently while working closely with the backend team
- Delivered features quickly in an early-stage startup with shifting priorities

Tech Stack: Vue.js, Vuex, JavaScript, SASS, HTML, CSS, Figma

Front-End Developer (Part-Time) at ED Insights AS, Gothenburg

JANUARY 2018 — JANUARY 2019

A part-time job alongside my studies, building a simple static website for ED Insights in WordPress. Created the prototype in Figma and implemented parts of the site.

- Designed a UI prototype and design alongside customer in Figma
- Developed and maintained WordPress theme with custom JavaScript, HTML, and CSS
- Built and styled parts of a static WordPress site with custom JavaScript, HTML, and CSS

Tech Stack: WordPress, JavaScript, HTML, CSS, Figma

Front-End Developer (Part-Time) at Posifon AB, Gothenburg

JANUARY 2018 — JANUARY 2019

A part-time job alongside my studies, maintaining the WordPress site for Posifon, a company making GPS safety and positioning products. Kept the site updated and added new products.

- Maintained WordPress e-commerce site with custom JavaScript functionality

Tech Stack: WordPress, JavaScript, HTML, CSS, Figma

EDUCATION

Front-End Developer, Medieinstitutet yrkeshögskolan, Gothenburg
AUGUST 2017 — APRIL 2020

Preparatory Studies for Higher Education, Ljungskile folkhögskola, Gothenburg
JANUARY 2016 — JANUARY 2017

IVIK (Introductory Education for New Foreigners), Angeredsgymnasiet, Gothenburg
AUGUST 2011 — JULY 2012

IVIK (Introductory Education for New Foreigners), Kärrtorps gymnasium, Stockholm
AUGUST 2010 — JULY 2011

INTERNSHIPS

Front-End Developer Intern at Plejd AB, Gothenburg
2019 — 2020 (7 months total across two periods)

A frontend developer internship at Plejd, a Swedish smart-home company, while I was studying. Worked in a professional codebase building internal applications.

- Developed internal applications used by 50+ employees daily
- Worked with Angular.js and Vue.js in professional codebase with 100,000+ lines of code
- Created UX prototypes in Figma based on user feedback and usability testing
- Participated in code reviews and learned professional development workflows
- Contributed to production features still in use today
